models that conceptualize coping as “regulation under stress” establish links to the development of emotional, attentional, and behavioral self-regulation and suggest constitutional underpinnings and social factors that shape coping development.

The Development of Coping | Annual Review of Psychology

The coping strategies a child chooses are very sensitive to different factors, such as biological factors e.g. brain development and environmental factors, such as the emotional support system a child is exposed to, especially in their younger years. In infancy and early childhood we are reliant on caregivers to help us ‘cope’.

What is Coping Theory? - PositivePsychology.com

In other words, deducing the mechanism through which coping affects health outcomes aids in answering the more basic question of whether coping is primarily a function of personality or is a joint expression of the effects of both the person and the situation." (p. 165 from "Stress, Coping, and Development" by Carolyn M. Aldwin)

Stress, Coping, and Development, Second Edition: An ...

Abstract. Despite consensus that development shapes every aspect of coping, studies of age differences in coping have proven difficult to integrate, primarily because they examine largely unselected age groups, and utilize overlapping coping categories. A developmental framework was used to organize 58 studies of coping involving over 250 age comparisons or correlations with age.
