...

One turn equals to the complete consumption and replenishment of the inventory in question. The number of inventory turns is usually based on a calendar year. Turns is just a ratio of consumption vs. on hand. Example: Say your yearly sales at cost was \$5million and your average inventory was \$500,000, then you would have 10 turns.

Inventory Turns Calculation - lean-math | Figuring to Improve

When it comes to mathematical issues, a person needs to maintain a calm approach while solving some mathematical questions. To make that happen a person should start involving some creative ideas to make mathematics fun. Therefore, indulging some creative ideas will help one solve mathematical problems in a better manner.
