In general, for any integers a , b and c , we can say, $a + (b + c) = (a + b) + c$. Therefore addition of integers is associative.

Subtraction : Consider the integers 7, 4 and 2. $7 - (4 - 2) = 7 - 2 = 5$. $(7 - 4) - 2 = 3 - 2 = 1$. Therefore, $7 - (4 - 2) \neq (7 - 4) - 2$. In general, for any three integers a , b and c .

operations in the following way: if $a < b$ and $c < d$, then $a + c < b + d$; if $a < b$ and $0 < c$, then $ac < bc$. It follows that \mathbb{Z} together with the above ordering is an ordered ring. The integers are the only nontrivial totally ordered abelian group whose positive elements are well-ordered.
