Solving Quadratic Inequalities: Examples

A graph of the quadratic helps us determine the answer to the inequality. We can find the answer graphically by seeing where the graph lies above or below the x -axis. From the standard form, $x^2 - 5x + 6$, $a > 0$ and therefore the graph is a "smile" and has a minimum turning point.

Quadratic Inequalities | Equations and Inequalities

The solution of a quadratic inequality are all of the points within the area $y > X^2 - 1$ where $y = 0$. In other words, the solution of a quadratic equation holds the same meaning that you are accustomed to. The solution is just where the graph crosses the X -axis. The new twist is that instead of just two or fewer points.
