It is formed by the papillary dermis and the reticular dermis. The subcutaneous tissue, which is derived from the mesoderm, is the innermost layer of the skin and is mainly composed of fat and connective tissue. Skin appendages are derived from the skin and include hair, nails, and glands.

Skin and skin appendage - Knowledge for medical students ...

This chapter discusses the skin and its appendages—hair, nails, and skin glands—as an organ system. Ideally, by studying the skin and its appendages before you proceed to the more complex organ systems in the chapters that follow, you will improve your understanding of how structure is related to function.

Skin and Its Appendages | Basicmedical Key

CHAPTER 7 Skin and its appendages. In this chapter, the types and functions of skin in different parts of the body are described first, followed by the microstructure of the epidermis and dermis, and the appendages of skin including the pilosebaceous units and the sweat glands and nails. The development of skin, natural skin lines and age-related changes, and clinical aspects of skin, e.g. grafts, surgical skin flaps and wound healing, are also described.

Applications focusing on biology and physiology of the skin, skin stem cells, skin appendages such as hair follicle, sweat glands, and extracellular matrix may be assigned to ACTS. There are shared interests with Oral, Dental and Craniofacial Sciences (ODCS) in the investigation related to Sjogren's syndrome.

ACTS | NIH Center for Scientific Review

The skin and its accessory structures make up the integumentary system, which provides the body with overall protection. The skin is made of multiple layers of cells and tissues, which are held to underlying structures by connective tissue (Figure 1). The deeper layer of skin is well vascularized (has numerous blood vessels).

Structure and Function of Skin | Biology for Majors II

Furthermore, the dermis contains glands, nerves, blood vessels, and hair follicles. In addition, the dermis has a famous protein called collagen, which gives our skin its strength and some elasticity.
