vertebrates. It supports the structures of the face and provides a protective cavity for the brain. The skull is composed of two parts: the cranium and the mandible. In humans, these two parts are the neurocranium and the viscerocranium (facial skeleton) that includes the mandible as its largest bone.

Vertebrae Definition.

Vertebrae are bones located within the vertebral column. In humans, they are a series of 33 bones that run from the base of the skull to the coccyx. The irregularly shaped bones form the roughly S-shape of the spinal cord.
