Mosaic, which causes mottling or spotting of foliage and sometimes curling, dwarfing, and narrowing of the leaves, is due to infection by any of several viruses. Red rot (important in Indonesia and South Asia) is characterized by interrupted red and white patches within the cane along with a sour alcoholic odour when the cane is split open.

Signs Of Sugarcane Disease

"One of the main diseases that they discuss with sugarcane farmers is rust, if you get too much of it on there the plants don't produce enough chlorophyll and don't grow well," said Meaux. "It was really a mild December and January and we had a few cold snaps in February but not enough to slow down the rust from
