Systematic errors have a definite value, an assignable cause, and are of the same magnitude for replicate measurements made in the same way. They lead to bias in measurement results. There are three types of systematic errors:

- Instrumental errors.
- Method errors
- Personal errors

In both the mercury (II) oxide and copper (II) carbonate reactions, a gas was produced. If oxygen was produced the flame would have gotten brighter and burned more, if hydrogen was produced a “pop” and short blue flame will be produced, but if carbon dioxide was produced it would extinguish the flame. A.
