Laser-Tissue Interaction | (1990) | Publications | Spie

Laser-tissue interactions involve (1) the physical mechanism of interaction [photothermal, photochemical, photomechanical], (2) the biological level of interaction [tissue/organ, cellular, organellar], and (3) the time course of the interaction [immediate physical effect, short-term biological response, long-term healing and structure/function].

Laser-Tissue Interactions - SPIE

Laser based techniques are in continuous development in medical research, diagnostics, and therapeutics. For example, in ophthalmology these techniques are ranging from a well established technique such as photocoagulation of retinal vessels with blue light from continuous emitting argon ion lasers, to the more recently developed technique with pulsed infrared emission from neodymium-yttrium ...
