Plus, ManyBooks has put together collections of books that are an interesting way to explore topics in a more organized way.

Test Driving Javascript Applications Rapid

All of this is described in Test-Driving Java Applications. I think it's important to read all of part 1, Creating Automated Tests. The chapters cover everything you need to know to get started writing unit tests for both server side code and UI code, how to test asynchronous code (very important in JavaScript) and how to replace dependencies with test doubles such as fakes, stubs and spies.

If you are using testng.xml then map all your test classes in the testng.xml. Create a batch file and configure the path of testng.xml in the batch file, later execute the batch file alone to trigger the test scripts. Make sure that your appium server is up and running to listen to your action requests from the client-side (application). Thanks, Sanoj

Test Automation for Windows Desktop Applications using Winium

It works for me too but there is a tricky part: Let's say your page is already loaded. If you interact with an element [e.g. send a .click() or .send some keys to it] and then you want to check when your page is finished processing you need to add a delay: e.g. click(), sleep(0.5 sec), wait until (readyState='complete' & jQuery.active==0).
